Dt Sep 08th, 2026

- Created a project name as Terraform AKS in the Azure Dev ops organization

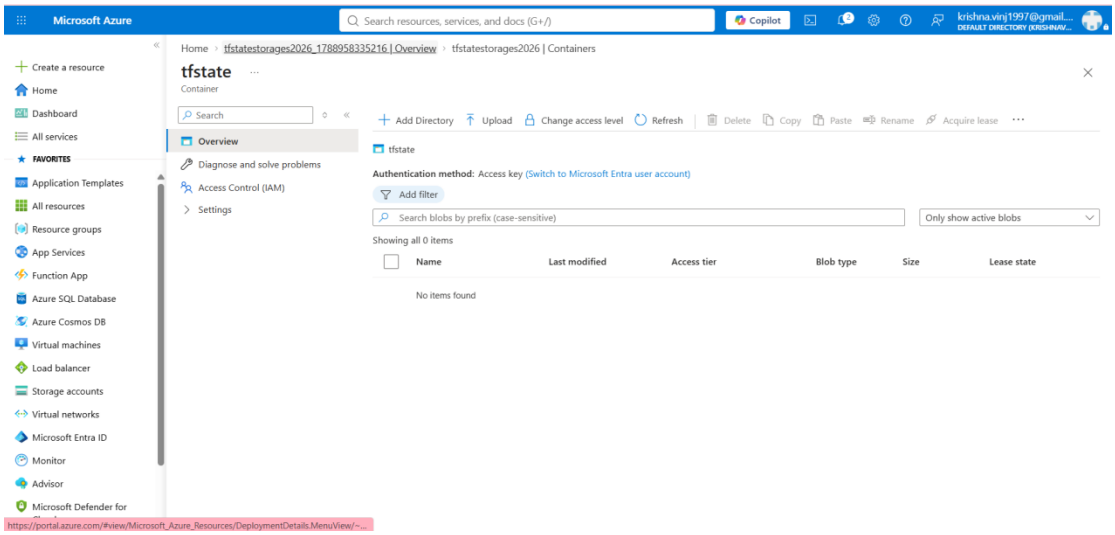

- Created resource group manually.

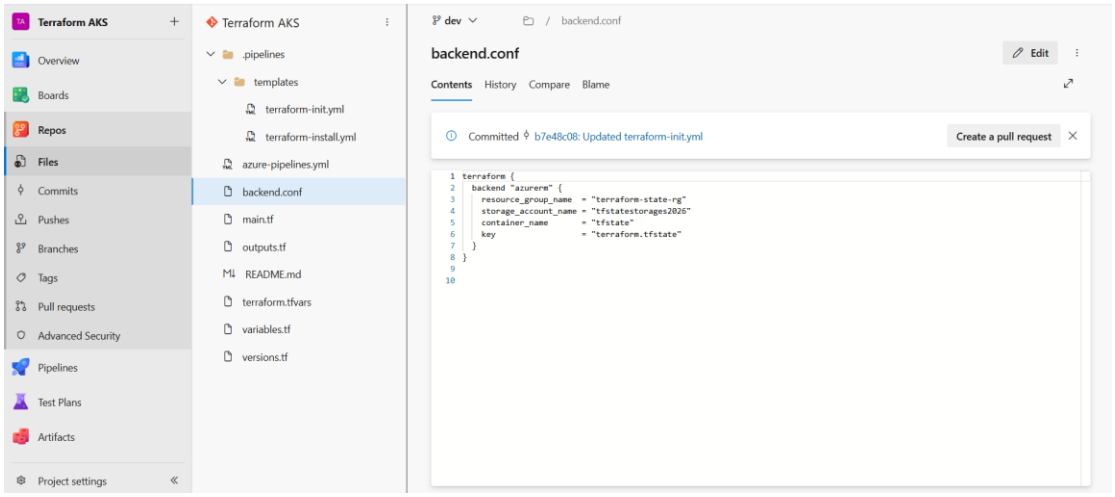

- Created a storage account

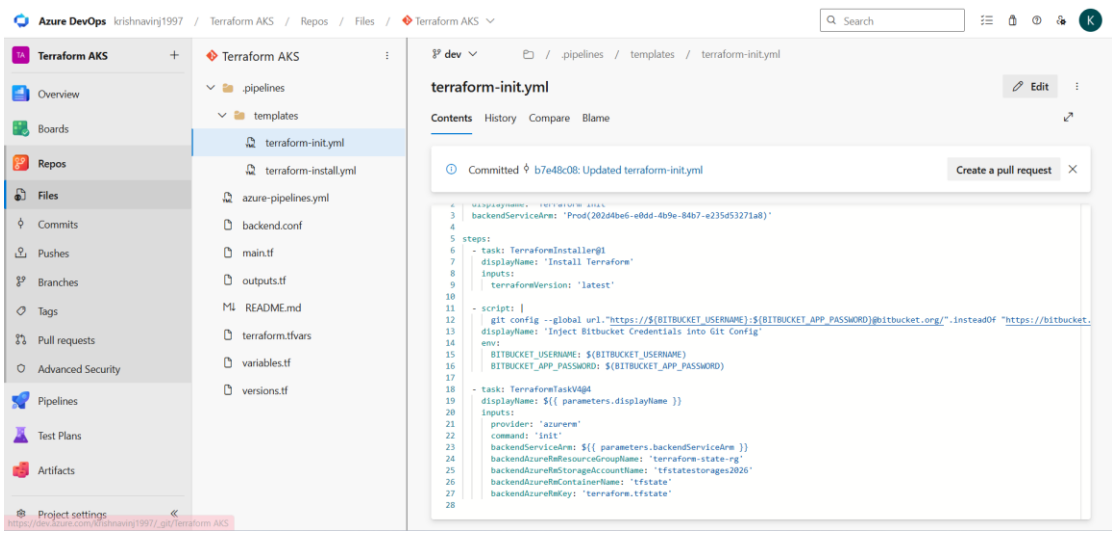

- Created a container to store the data.

- I updated the resource group name, storage name and container name which I created through portal in the backend.conf file.

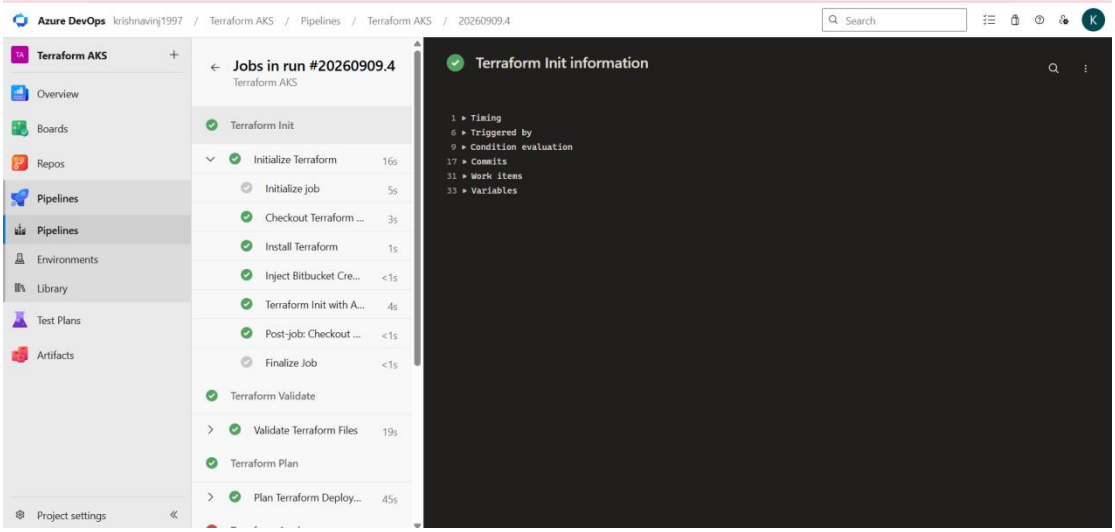

- Updated the resource group name, storage name and container name in the terraform init.yaml

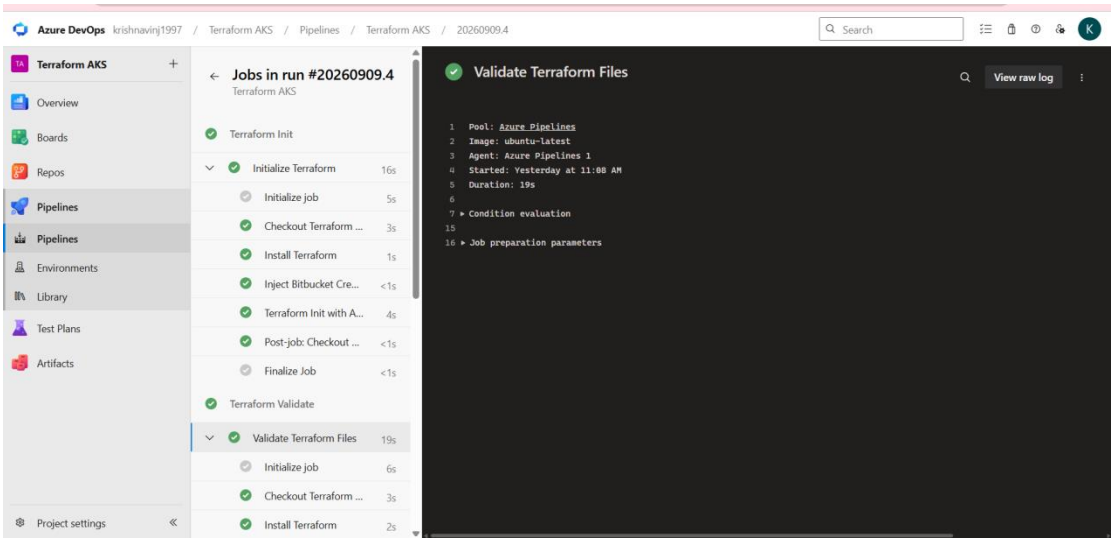

- Dt Sep 09th, 2026

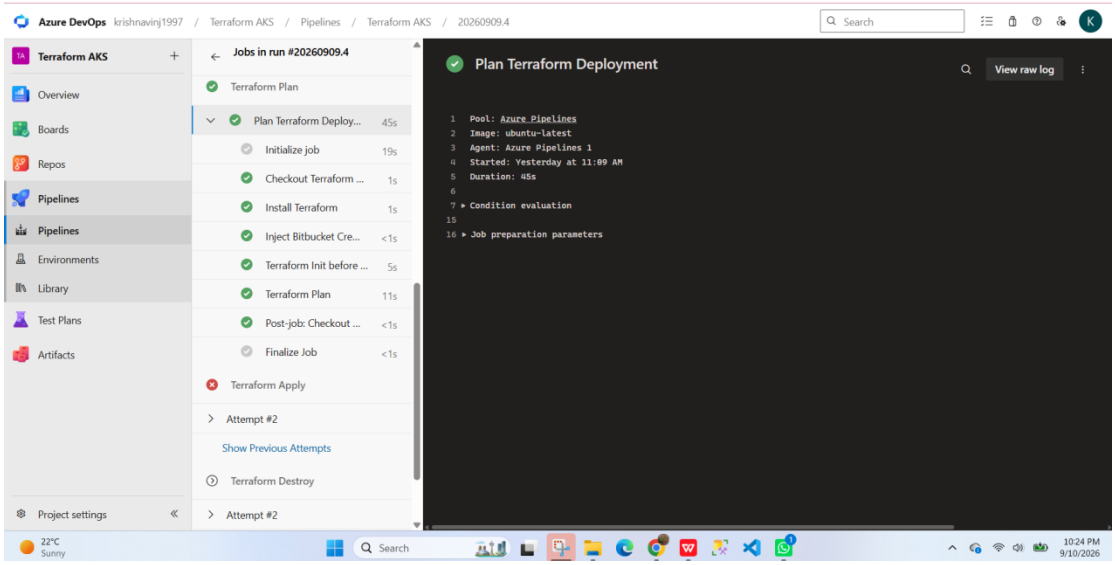

- Terraform init

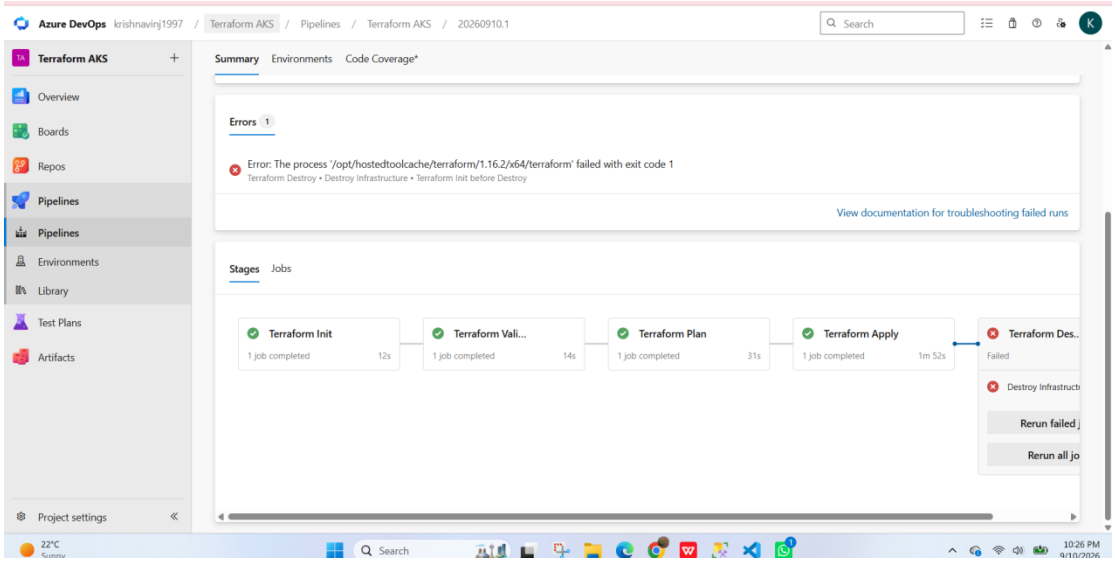

- Terraform validate

- Terraform plan

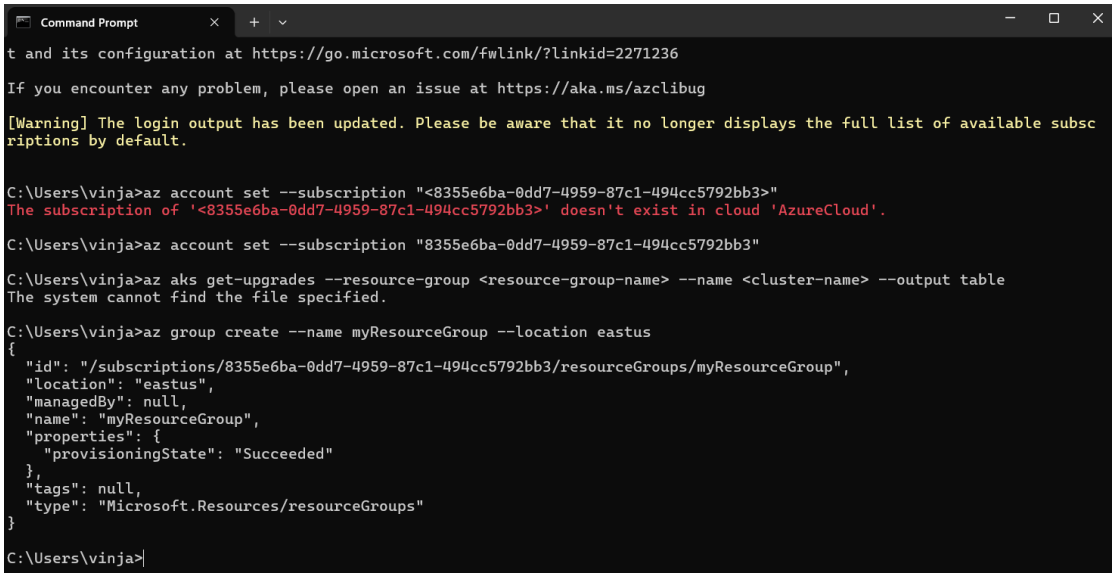

- Terraform apply successful.

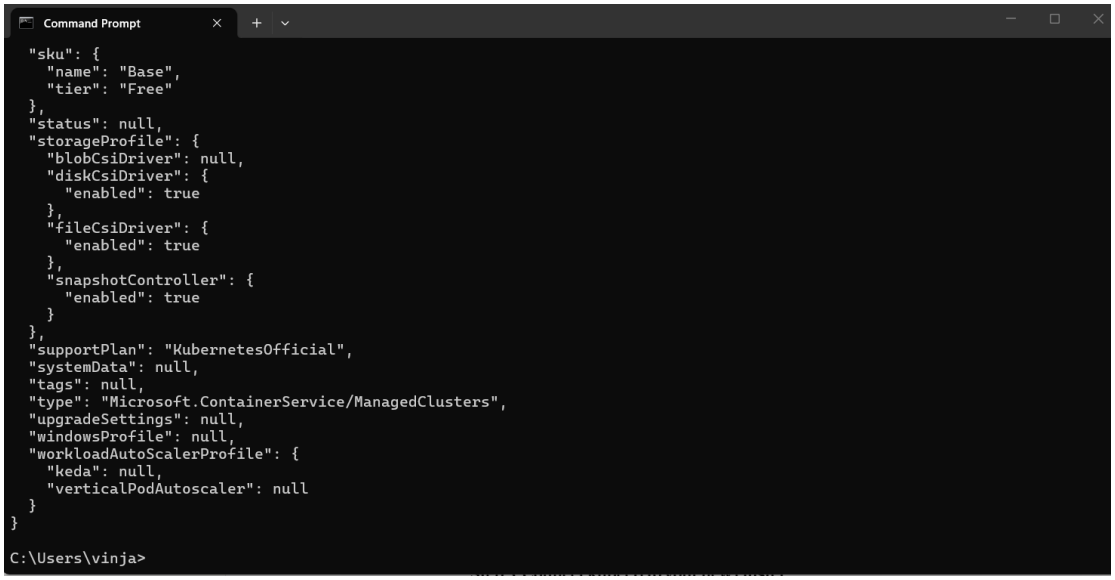

The first Terraform apply failed because the required role permissions were missing. After updating the role permissions in the Azure subscription IAM, I ran terraform apply again, and it succeeded.

- Dt Sep 10th, 2026

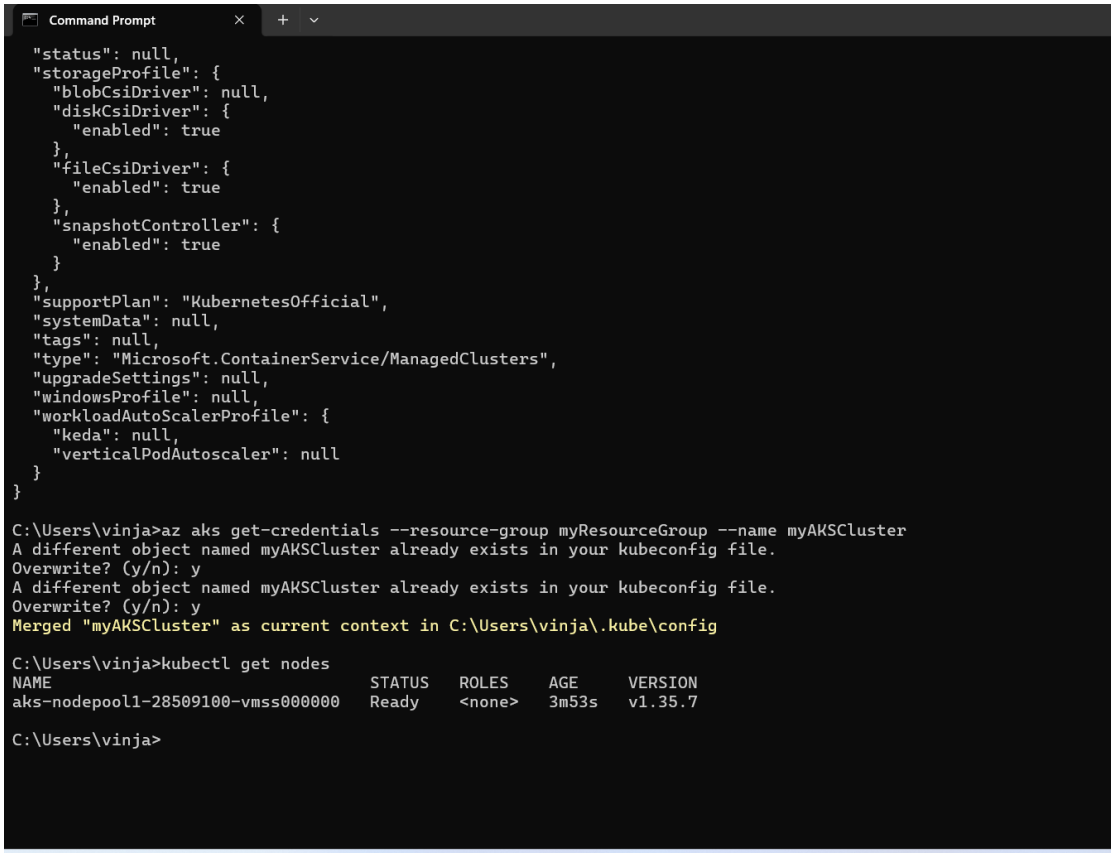

- I logged in CLI.
- Created resource group.

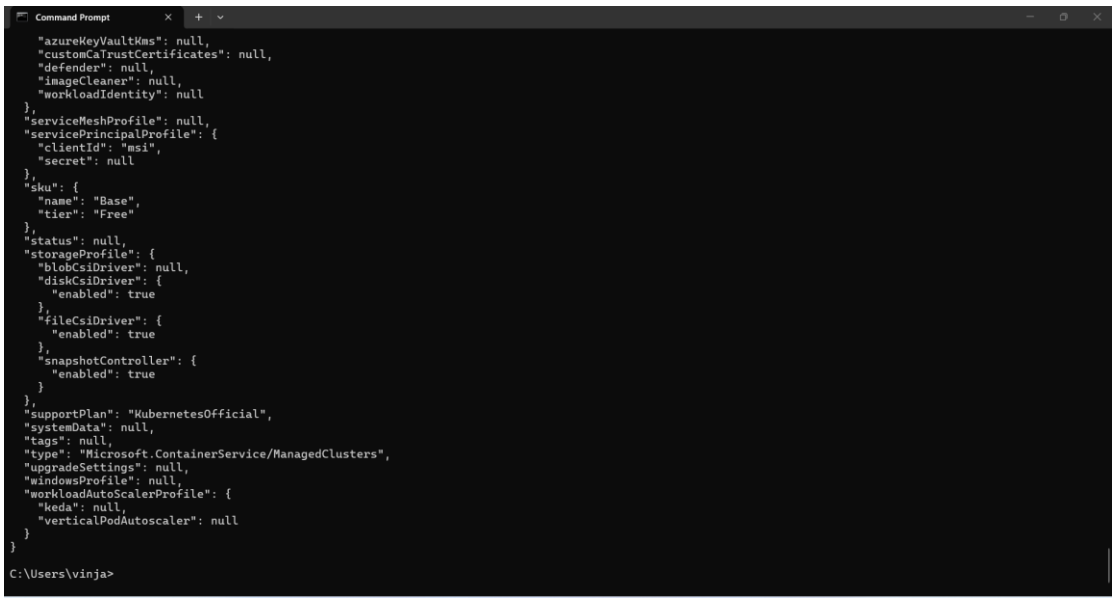

- Created an AKS cluster inside that resource group

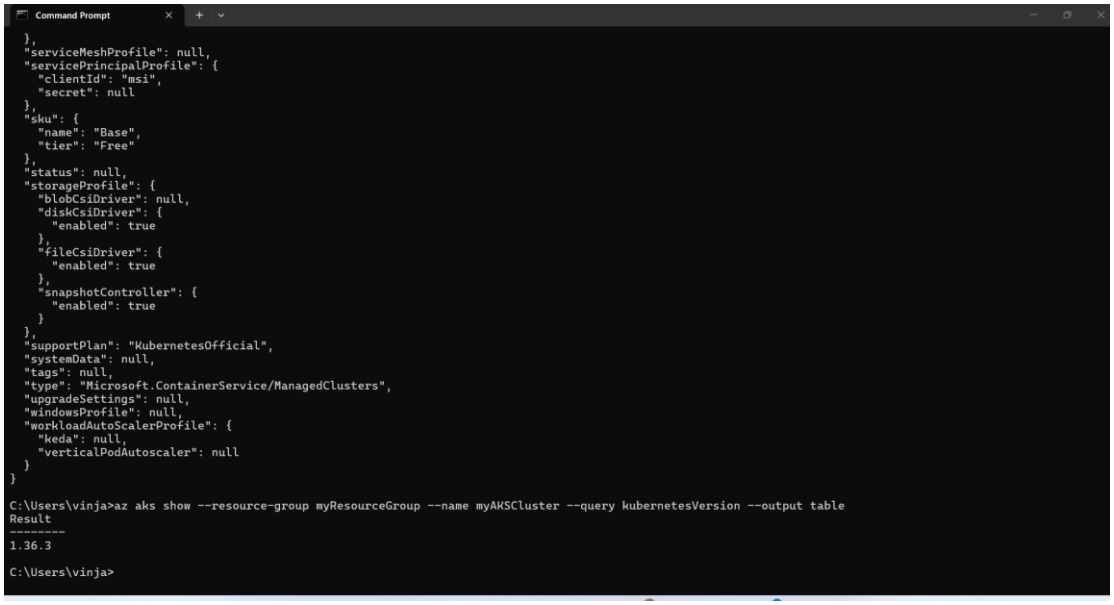

- Verified Cluster is working

- Ran the upgrade command

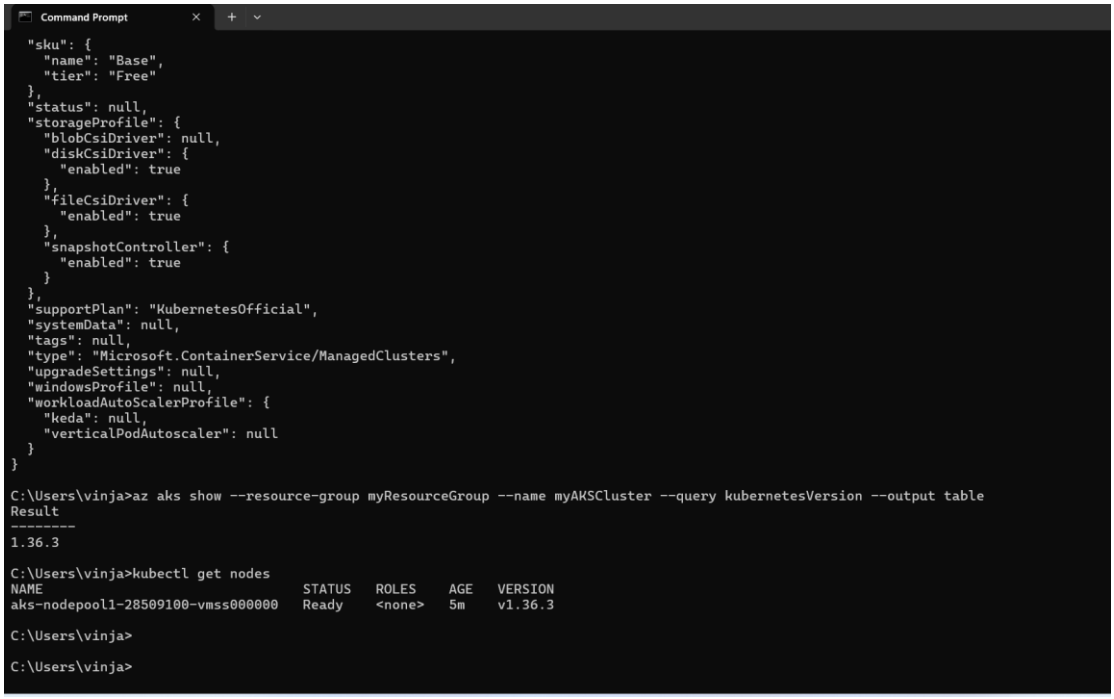

- Confirmed the upgrade.

- Control plane version: 1.36.3 ✓

- Node version: v1.36.3 ✓(matches, node is Ready)
